

Bucks County Bicycle Company

Fitting Services

Riding Your Bike Shouldn't Hurt – it's as simple as that. As a rider, you don't have to accept that riding enjoyment means enduring some level of discomfort. Bikes may come in set sizes and geometries, but individuals don't. As bike fit specialists, we understand the role of body alignment, flexibility and balance and how these factors influence each rider uniquely. When we apply these principles to each rider as an individual, we are able to fine-tune all the geometry of your bike, as well as assist with form and riding style to create a perfectly pain free ride. A pain free ride is what you desire and our fit specialists are trained to help you create it. Call or stop by to book your appointment with our certified bike fit specialists.

Body Fit

\$250

(90 min - 2 hours)

The Body Fit is entirely personal to you the rider. Our Body Fit process takes into account the whole person when adjusting your bike to fit your needs and riding style. We will address your specific anatomical considerations, which include not only body measurements, but your degree of flexibility, consideration of previous injuries, muscle strength and weakness, as well as personal riding style and cycling goals. Only then will we be able to fine tune the parameters of your bike - seat height and angle, fore and aft position, handlebar width and drop, stem length and rise. We may also make suggestions about form and alignment. The end result is a precisely-tuned bike giving you a pain free, optimal riding position on a bike that is designed truly just for you.

**The body fit does not include a cleat fitting.*

Cleat Fit

\$100

(60 minutes)

A cleat fit will adjust the fore and aft of the cleat over the ball of the foot to prevent hot spots, numb feet and pinched nerves. Our cleat fitting services use the R.A.D = Rotational Adjustment Device to align the cleat on the bottom of the shoe with the natural angle of your feet while pedaling. This helps prevent rotational stress from being imposed on the ligaments and tendons of the ankles, knees and hips.

Floor Fitting

Included with Bike Purchase*

When you purchase a new bike from Bucks County Bicycle we will ensure that you are matched with the appropriate size bike for your frame and riding needs. We will adjust your seat height and visually determine and make adjustments to ensure a neutral riding position for you on your bike with respect to height and reach.

**For bikes purchased elsewhere, there is a charge for this service of \$60.*
